Project Management

Our project was hosted on Github using an organization repository with all five members as contributors. Due to the fact that there is many different aspects of the application we decided to introduce three separate branches: UI, OCR, and Testing. Each branch was responsible for handling their sections of the code and when finished merged back into master. We met once a week to discuss necessary paperwork and development of each branch. We also utilized GroupMe for any other discussions between meetings.

Non-Applicable Items

For our project we felt it was not necessary to collect data at this point. Through thorough unit and integration testing we felt we could successfully find, observe, and fix application bugs and shortcomings. Due to this we allocated more time and manpower into testing, both unit and integration.
